

On the level!

AVRO 748 MF always matches height of loading vehicles

Cumbersome and expensive load transfer equipment is *out* as far as the new Avro 748 MF is concerned. A unique adjustable undercarriage varies the level of the aircraft floor so that it exactly matches the height of loading or unloading vehicles. And the attitude of the 748 MF can also be adjusted laterally should loading take place on uneven ground.

Thus the aircraft can achieve the rapid cargo handling and quick turnrounds so essential in military operations. The 748 MF has been ordered in quantity for the R.A.F. as a S.T.O.L. close-support military freighter. Its many roles include supply and troop dropping, transportation of freight, vehicles and troops, and aeromedical evacuation. Clearly, there will be plenty of work for the 748 MF in service with the Royal Air Force.
