

# FAIREY

## ACHIEVEMENT

### In operation

No other anti-submarine aircraft is so compact, efficient and economical as the Gannet. It combines in a single aircraft the ability to search and strike with the most formidable modern weapons, has twin engine reliability and is equally suitable for ship or shore based operations. Gannets are in squadron service in numbers NOW with the Royal Navy and Royal Australian Navy.

### In production

The Fairey Gannet was one of the first of the super-priority aircraft in service. Rapid production, complete interchangeability, no time-lag between prototype and production — these are the advantages of Envelope Tooling, a revolutionary method of assembly invented, designed and developed by Fairey.
