

TODAY A TRANSPORT —

TOMORROW A TOPDRESSER!

Cessna 180 Cropduster/Sprayer 185 Conversion

ONE HOPPER FOR BOTH LIQUID AND DRY LOADS

Now any Cessna 180 or 185 can function as a double-purpose aircraft. For most of the year it can serve as a rugged, general-purpose aerial transport. Whenever topdressing needs to be done, out come the passenger seats and in go the specially designed hopper and accessories. Liquid spraying is powered by a wind-driven pump. Dust discharge is controlled by variable venturi-action louvres. Conversion for either liquid or dry loads takes only a few hours with ordinary hand tools.
